Properties of Gold Gimp Plugin

GEGL Operation name lb:gold

blendmode
Emboss blend mode switch between "plus" and "color dodge"

expand
Internal Gaussian Blur to control the size of the gold bevel

azimuth
Emboss azimuth of the bevel

elevation
Emboss setting that rotates the brightest pixels

medianradius
Median's Radius to control wideness of the bevel. Lower values make the bevel wider.

huerotate
Hue Color rotation of the bevel. This will make the bevel an alternative color.

desaturate
Desaturate the gold bevel to make it silver or just dampen out a color.

light
Adjust the lightness of the bevel

medianshape (hidden)
Adjust the internal median shape. This effect is barely noticeable. It only is noticed on thin small bevels. Thus hidden from the GUI.

pluginpolicy (hidden)
Enable/Disable Gold Bevel – this is for plugin developers that want to call gold
